

For Immediate Release

See it at Vision Expo East:

Essilor Instruments International's Pro-E™ 600 edger: a new compact high-volume solution to meet both your production and accuracy needs.

Essilor introduces the Pro-E™ 600 edger: designed for productivity with a holistic approach to finishing lenses, combining traditional wet edging with the versatility, precision, and speed of milling.

Innovation combined with Essilor Instruments' decades of experience and the exacting needs of the most demanding labs has resulted in an edger that is 40 to 50 % faster than traditional table-tops; that can process the most complex of shapes and mountings, and enable the user to customize all aspects of lens finishing, including engraving and creative shapes.

The durability and robustness of the Pro E 600 has been confirmed through 18 months of rigorous field testing in a multitude of conditions, and environments, and includes the gold-standard coverage and support infrastructure Essilor Technologies is famous for.

The Pro E 600 is the perfect edging system for any higher volume ECP or integrated retailer, or for a lab seeking a top-end precision and specialty instrument at an affordable cost.

Available for pre-order March 31st, for delivery starting June 15th.

Visit us at Vision Expo East booth # LP7234 this week-end for more information. You may also contact your local Essilor Technologies Territory Manager; call us directly at: 1-888-337-1429, ext. 1; or email info@essilortechnologies.ca.
